VEHICLE TRANSACTIONS

42%
REVENUE FROM FORD

5
TOP REVENUE STATES

PRIMARY KPI

Total Revenue = Selling Price × Units Sold (one vehicle per transaction)

Executive Summary

The dataset shows a highly concentrated revenue structure, where a small number of manufacturers and models generate the majority of sales revenue. Strategic focus on top performers, regional targeting, and pricing intelligence will unlock the next stage of growth.

Revenue contributed by Ford

#1
Ford Fusion — top performing model

CA · FL · TX
Highest sales volume states

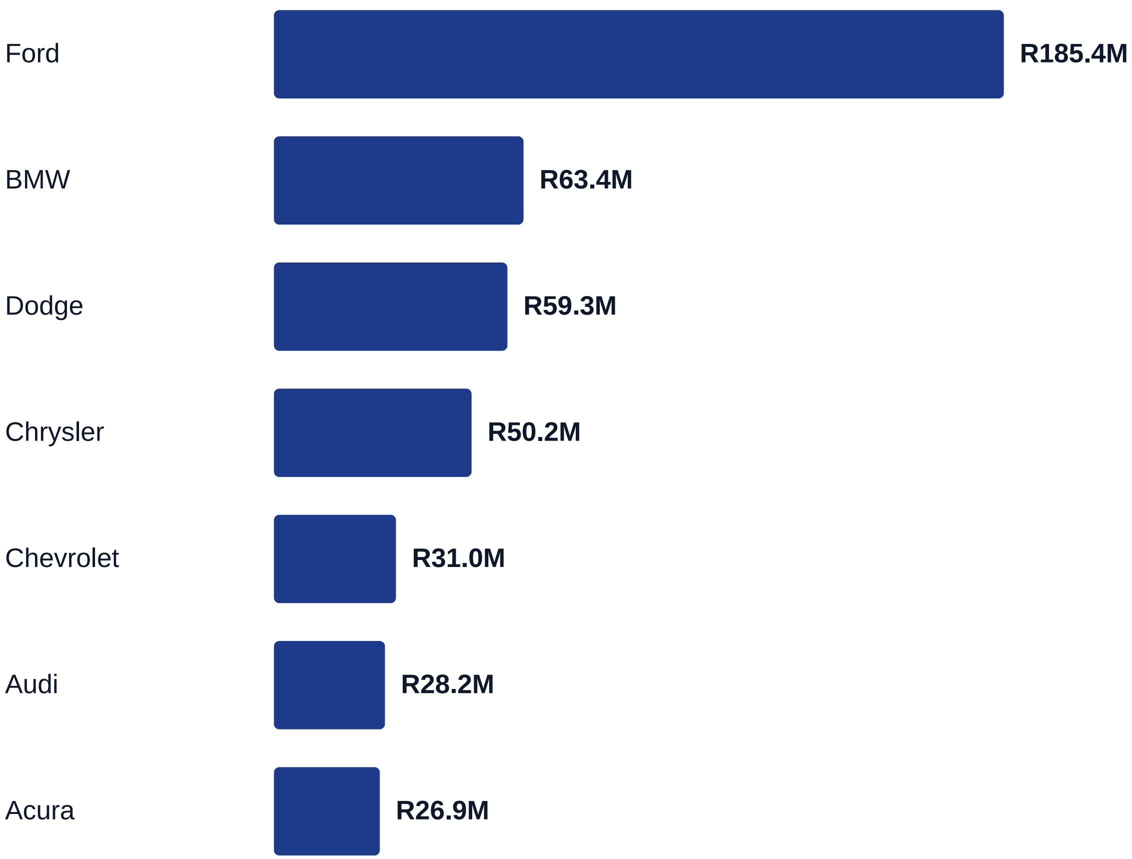
BMW · Audi · Acura
Strong premium revenue, low volume

2010–2015
Inventory concentration years

KEY TAKEAWAY

Revenue is dangerously concentrated. Ford alone drives 42% of total revenue and the Ford Fusion alone contributes nearly one-third of total sales. Diversification and regional optimization are the highest-impact next moves.

Revenue by Car Make



INSIGHT

Ford contributes ~42% of total revenue, making the business highly dependent on a single manufacturer.

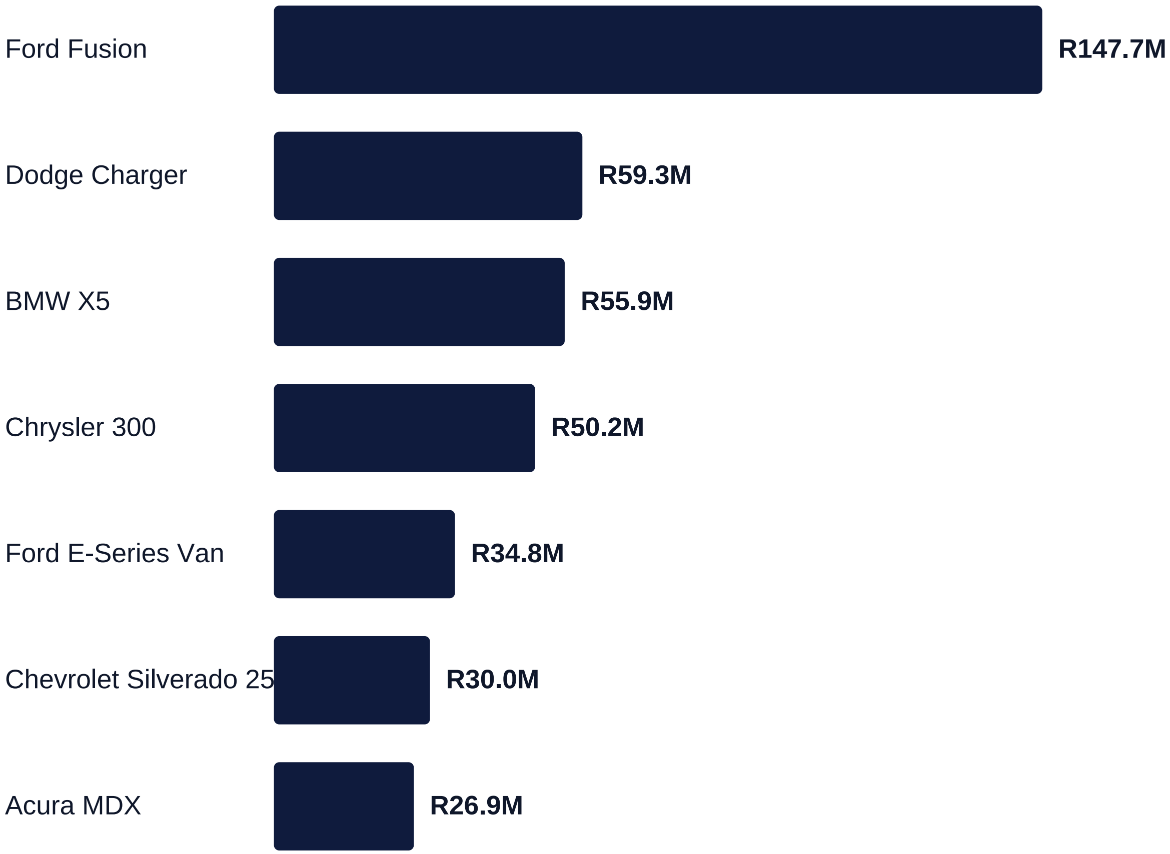
RISK

Over-reliance on Ford exposes revenue to inventory shortages, demand shifts, and pricing fluctuations.

RECOMMENDATION

Diversify inventory investment across BMW, Audi, Chevrolet, and Toyota to reduce concentration risk.

Top Revenue-Generating Models



HEADLINE STAT

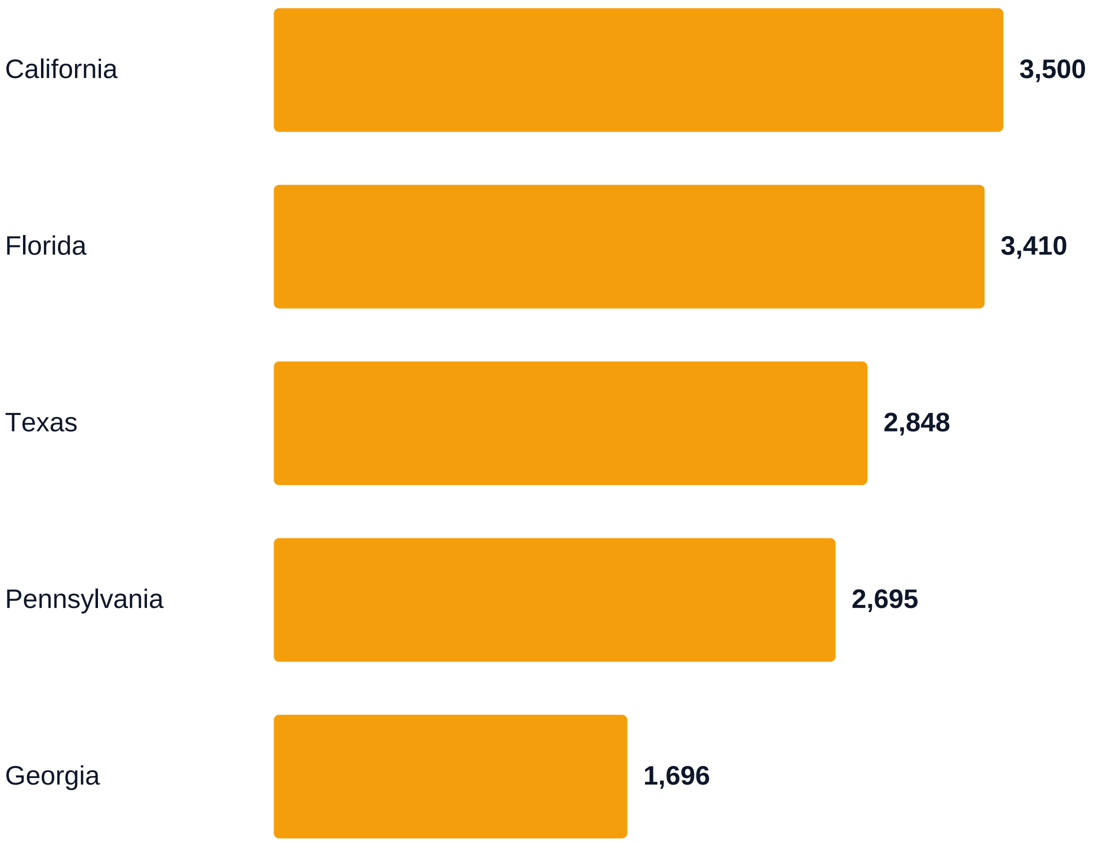
1/3

of total revenue comes from the Ford Fusion alone — the single most important vehicle in the portfolio.

RECOMMENDATIONS

- Build inventory forecasting models for top performers
- Deploy dynamic pricing strategies on hero SKUs
- Center marketing campaigns around Fusion, Charger, X5

Regional Performance



CALIFORNIA

Largest market — strong dealer network, high vehicle turnover.

→ Focus: premium & luxury segments

FLORIDA

Second-largest market — high population mobility, strong used demand.

→ Focus: family & fuel-efficient vehicles

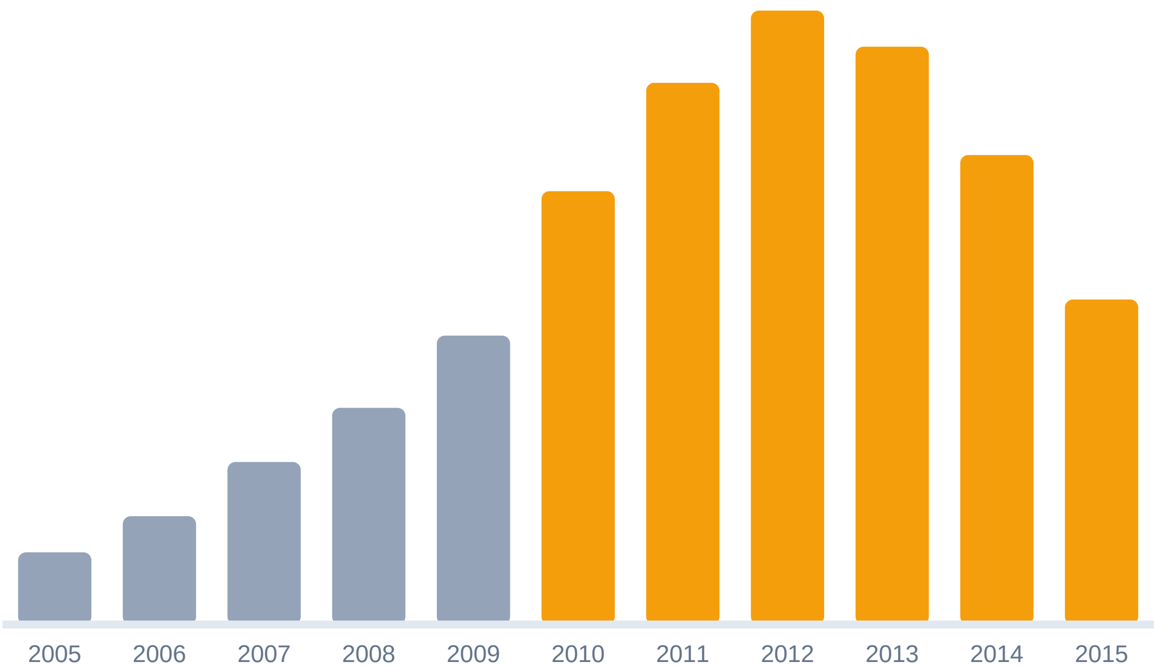
TEXAS

Strong pickup and SUV market.

→ Focus: trucks, commercial, SUVs

Vehicle Year Distribution

Inventory Concentration by Model Year (indicative)



BUSINESS IMPLICATION

Inventory is heavily concentrated in 2010–2015 vehicles, creating higher maintenance risk and depreciation pressure.

RECOMMENDATION

Balance the mix across:
• Late-model used vehicles
• Certified pre-owned
• Newer vehicle stock

Pricing Analysis

Several vehicles sell significantly above market averages while others fall below expected market values. The dataset's MMR, Selling Price, and Seller Profitability fields enable advanced pricing intelligence.

DATASET FIELDS

- MMR (Market Value)
- Selling Price
- Seller Profitability

CAN POWER

- Profitability dashboards
- Dealer performance scorecards
- Pricing optimization models

EXPECTED IMPACT

- Detect underpriced vehicles
- Maximize per-unit margins
- Improve profitability

Seller Profitability Analysis

The dataset contains a seller profitability field, unlocking dealer-level performance management.

OPPORTUNITY MATRIX

Star dealers — scale partnerships

Renegotiate pricing & fees

Premium niche — replicate model

Low Volume / Low Margin

Strategic Recommendations

01

Inventory Optimization

Increase stock of proven revenue drivers: Ford Fusion, BMW X5, Dodge Charger, Chevrolet Silverado.

02

Geographic Expansion

Prioritize inventory and marketing spend in California, Florida, and Texas — the top three revenue states.

03

Pricing Intelligence

Use MMR vs Selling Price to detect underpriced vehicles, maximize margins, and improve profitability.

04

Seller Performance Management

Build dealer scorecards: revenue, profitability, conversion rates, inventory turnover.

05

Predictive Analytics

Forecast vehicle demand, deploy dynamic pricing, optimize inventory replenishment and regional demand.

High-Level Conclusion

BOTTOM LINE

The business is heavily dependent on a small number of vehicle makes and models — particularly the **Ford Fusion** — while revenue is concentrated in a few key states: **California, Florida, and Texas**.

Future growth lies in **inventory optimization**, **regional targeting**, **pricing intelligence**, and **dealer profitability management**. A Power BI dashboard tracking revenue, profitability, inventory performance, and regional demand will give management the real-time decision-making capability required for the next stage of growth.
